

WATERMATIC™

WATER DOSING EQUIPMENT WITH A SINGLE UNIT FOR ONE OR MORE APPLICATIONS

Watermatic™ quickly and accurately doses and mixes water at the desired temperature

REVOLUTIONARY DOSING ALGORITHM BASED ON CALORIC CALCULATION

- Dosing starts immediately - no delay as in other water dosers
- No water wasting bypasses
- The dosing result is not affected by changes in the water temperature during dosing

ECONOMICAL

- Dosing can be done with a single unit for one or more applications
- Saves water, because there are no bypasses made

ADVANTAGES OF A SEPARATE CONTROL PANEL

The control panel can be placed in a central position, separate from the actual dosing unit

USER-FRIENDLY

- Using the separate control panel keypad, all you need to do is select the water quantity and temperature to start dosing
- Using the partial dose function, you can dose the water quantity in two parts
- Can easily be integrated in an automation system

FAST AND ACCURATE DOSING

- Dosing rate up to 100 l/min
- Dosing accuracy: +/- 1 dl in quantity, 1 degree in temperature
